SUMMARY

Software Engineering student focusing on Java backend development. Hands-on experience building full-stack web applications using Spring Boot, Spring Security, REST APIs, MySQL, React, TypeScript, payment integration, authentication, and real-time features.

EDUCATION

Saigon University

2023 – 2027

*Bachelor of Software Engineering**GPA: 3.4/4.0***Relevant Coursework:** Object-Oriented Programming, Data Structures and Algorithms, Database Systems

SKILLS

Languages: Java, C/C++, JavaScript, TypeScript, SQL, HTML/CSS**Backend:** Spring Boot, Spring Security, Spring Data JPA, Hibernate, REST API, Socket.io**Frontend:** React.js, Redux Toolkit**Database:** MySQL**Tools:** Git/GitHub, Postman, IntelliJ IDEA, VS Code

PROJECTS

Cinema Booking System | *Spring Boot, Spring Security, JPA/Hibernate, MySQL, React, Redux Toolkit, VNPay* 2026

- Built a full-stack cinema booking platform with authentication, movie/showtime browsing, seat selection, checkout, payment processing, order history, and ticket email delivery.
- Implemented backend REST APIs using Java 17, Spring Boot, Spring Security, Spring Data JPA, Hibernate, and MySQL.
- Developed authentication features including email/password login, Google login, email OTP verification, and password reset.
- Integrated VNPay payment flow with payment URL generation, return/IPN handlers, payment status updates, and ticket confirmation emails.
- Built frontend features using React, TypeScript, and Redux Toolkit for seat-map retrieval, seat holding/releasing, combo updates, and order total recalculation.

VinhKhanh Audio Guide Platform | *Spring Boot, React, TypeScript, MySQL, Socket, VNPay* 2026

- Built a tourism audio guide platform with login/register, Google authentication, nearby shop discovery, multilingual audio playback, cart, ordering, and VNPay checkout.
- Implemented role-based features for customers, shop owners, and admins, including shop-owner menu/audio management and admin dashboards.
- Developed tour planning features based on user budget and available time, along with order-history tracking.
- Built real-time online tracking using Socket.IO rooms to push global and shop viewer counts to Admin and ShopOwner portals.
- Integrated Python gTTS for audio generation and used MySQL for data persistence.

Smart School Bus Tracking System | *NestJS, React, MySQL, Socket.IO, Leaflet, TSP* 2025

- Built an MVP school bus tracking system with JWT authentication, role-based portals for Admin, Driver, and Parent, and real-time bus location updates on a map.
- Implemented core modules for schedules, routes, buses, drivers, students, incident logging, and in-app notifications.
- Developed nearest-neighbor TSP
- Used NestJS, TypeORM, MySQL, Socket.IO, React, Leaflet, and REST APIs with modular backend architecture and role-based access control.

ACTIVITIES

Study Jams 2026 – Saigon University | *Generative AI Program*

Feb 2026

- Joined a hands-on program to learn and explore important topics in Generative AI.

INTERESTS

Chess, backend development, system design, problem solving
